NEWCO NDT CARBON FILTRATION SYSTEMS FOR PENETRANT WASTEWATER

A flexible, scalable and easy-to-install solution to treat discharged water from penetrant testing lines. Rinse water passes through a contained carbon filter that captures penetrant and/or emulsifier. Systems can treat and discharge clean water or integrate holding tanks for a closed loop option. Built-in pressure gauge indicates when the filter needs to be replaced. All waste is contained in the 55 gallon steel drum, which detaches easily from the system, when the replacement drum is ready to install. Replacement parts including replacement drums can be ordered through Newco. All units require 110v/60Hz. Other voltages can be priced upon request. Does not include spent drum disposal. Please contact Newco with questions or special requests. Standard configurations below:

CF1- Single Drum Filtration System *(Recommended for up to <15 gal/day)*

Includes Auto sump pump, Pre-filter, Single 55 - gallon carbon filter drum, Pressure gauge, and Pressure bypass.

CF2- Dual Drum Filtration System *(Recommended for up to <50 gal/day)*

Includes Auto sump pump, Pre-filter, Dual 55 - gallon carbon filter drums, and Pressure gauge, and Pressure bypass.

CF3- Tri-Drum Filtration System *(Recommended for <75 gal/day)*

Includes Auto sump pump, Pre-filter, Triple 55 - gallon carbon filter drums, Pressure gauge, and Pressure bypass.
